

Abstract

A small company from Croatia developed an innovative process based organizational IT tool which enables straightforward overview of work organization and associated processes together with monitoring of project activities realization. The company is offering licensing and technical consultancy.

Description

The program is an organizational IT tool which enables overviewing work organization and processes together with monitoring of project activities realization. It is suitable for all business and administrative users.

The program provides an overview of activities and subactivities of the process by sectors and subsectors.

This program has a possibility to interact with other program packages and the requests of quality management system standards (ISO, HACCP, ...). The program is network aware in the manner that the data can be updated in one place and instantly be used by different user in another location. This enables insight into actual situation of the organization.

Along with the program the company offers consultant help in organizing efficient and executable procedures and template preparations.

Innovations and advantages of the offer

Clear and simple organizational IT tool: one can enter in every activity or subactivity on just one display with only one or two mouse clicks, and with another mouse click one can enter certain kind of template: procedure, work instruction, form, document, work description. In addition, one can write the remarks and suggestions, as well as plan and promptly monitor realization by each project or activity.

This program:

- is also straightforward to use
- enables prompt monitoring of project realization

- has process oriented network content sharing
- has various use scenarios
- has tailor-made interface

Current and Potential Domain of Application

All business and administrative users.
